

DEVELOPER BRIEF — FINAL

RePrime Terminal.

The instrument at which a commercial real estate transaction becomes real.

Investor-portal specification · Compiled from the Master Decisions Ledger (5,201 lines, ~3,000 entries across 14 sections) and seven Investor UX Deep Debate verdicts dated April 24, 2026. This document supersedes any earlier conflicting specification.

Build target: 30–40 invitation-only accredited investors. Every deal under executed PSA. No marketplace. No discovery. The investor arrives already knowing the room is curated.

FOUNDER

Gideon Gratsiani
Founder, RePrime Group

CEO

Chaim Abrahams
Co-Founder & CEO

COMPILED

April 29, 2026
Build_Spec is final arbiter

How to read this brief

OPERATING NOTES FOR THE DEVELOPMENT TEAM

This document is the developer-facing consolidation of every locked decision, every rejected pattern, every open question, and every constraint accumulated over the design of RePrime Terminal. Read it cover to cover before writing a line of code. Bring questions back to the founder; do not improvise on rejected items.

Status legend used throughout

TAG	MEANING	WHAT TO DO
LOCKED	Decided and final.	Build to spec.
BUILD NOW	Tier 1 — surgical edits to existing terminal, no new APIs.	Ship in next sprint.
OPEN	Question awaiting founder decision.	Do not assume; ask Gideon.
PHASE 2	Decided but deferred to post-launch.	Architect for it; do not ship at MVP.
KILLED	Explicitly rejected. Do not rebuild.	Skip, even if it seems obvious.

How conflicts are resolved

When two source documents disagree, the most recent wins. `Build_Spec.html` dated April 29, 2026 is the final arbiter per its embedded authority statement. The Investor UX Deep Debate (April 24, 2026) overrides anything earlier. Where this brief conflicts with a project file, this brief wins.

Two surfaces called "Terminal"

The phrase "RePrime Terminal" refers to two related but distinct surfaces. Do not confuse them.

SURFACE	WHAT IT IS	BRAND SPEC
Internal CRM Terminal	Single-file React artifact for the internal team only. Hosted in Claude.ai sandbox. Contact-management + investor-classification.	Arial · Navy #0E3470 · Gold #BC9C45
Investor Portal Terminal THIS BRIEF	Investor-facing deal portal. The product specified in this document.	Poppins body · Playfair Display headlines · Navy #0E3470 · Gold #BC9C45

22 Technical architecture — stack, security, integrations	p.42
23 Stakeholders — who decides what	p.44

01. Brand non-negotiables

COLOR · TYPE · VOICE · FORBIDDEN TERMS

Aesthetic standard: Blackstone meets Bloomberg. Institutional, precise, cinematic. Every artifact must feel like arrival at a private institution, not a product demo. Logo, color, type, and voice serve trust, not personality.

Color tokens

Use the exact hex values below as CSS custom properties. Brand colors are non-negotiable per Logo Research Brief, p9, and Status Report constraint set.

 Brand Navy #0E3470 · --rp-navy Primary text on light, primary surface on dark, all data labels.	 Brand Gold #BC9C45 · --rp-gold Single most important element on any page. Never overuse.	 Black #000000 · --rp-black Body text on light, dark backgrounds, primary buttons.	 White #FFFFFF · --rp-white Light text on dark, light backgrounds.
 Medium Blue #1D5FB8 · --rp-blue Secondary accent, links, secondary CTAs.	 Sky Blue #00A1FF · --rp-bright Tertiary accent, interactive states.	 Teal #009080 · --rp-teal Positive indicators, success states.	 Green #00A980 · --rp-green Positive metrics, upside, completed clock stage.
 Amber #FFBC7D · --rp-amber Caution / transition stage. DD <14 days.	 Coral #FF7474 · --rp-red Risk indicators, critical alerts. DD <3 days pulses.	 Cream-Gold #FAF6E8 · derived Tier-A return strip, Live Data background. Quiet authority.	 Light Gray #C8C8C8 · --rp-gray Borders, dividers, secondary text.

Color rules in practice. Dark backgrounds use #000000 or #0E3470 with white text and gold accent. Light backgrounds use #FFFFFF with navy text. Charts cycle gold → blue → bright → teal → amber. Financial: positive in #00A980, negative in #FF7474 — never reverse this. Pale blue was tested as a Tier-B background and rejected by the color committee for diluting the institutional register toward consumer fintech.

Typography

LEVEL	FONT	WEIGHT	SIZE	USE
H1 / Cover	Playfair Display	400	36–56pt	Page titles. Editorial register.
H2	Playfair Display	600	22pt	Section headers.
H3	Poppins	600 SemiBold	18pt	Subsection headers.
Body	Poppins	400 Regular	16px	All paragraph text. Never below 16px on portal.
Data / metric	Poppins	500 Medium	14–22px	Numbers, tables.
Hero metric	Playfair Display	400	22–32px	Purchase price, IRR. Tier-A row only.
CTA	Poppins	600 SemiBold	14–16px	Buttons, action labels.
Hebrew	Almoni Neue	400 / 500	—	RTL Hebrew content. Phase 2 launch.

Hard rules. Body text 16px minimum on every portal surface (dyslexia accommodation). Line height 1.45. Default letter spacing — never expand artificially. Inter font is killed; do not import. Bodoni Moda is a permitted alternate display font for editorial moments only — never body or data.

Brand voice — what to write, what to refuse to write

Write this way

- Precision over adjectives. `$24.2M` not "approximately \$24 million."
- Authority through specificity. "38 days to funding," not "quick close."
- State conclusions. Minimal hedging.
- Institutional but warm.
- Every sentence informs or persuades.
- Note terms in months, not years.
- External attribution for price ("current market conditions").

Permanently banned

- **"AI"** — never on any user-facing surface, ever. Use "Terminal Intelligence."
- **"advisor"** — SEC regulatory risk. Use "dedicated contact" or named role.
- **"3,000+ transactions"** and **"\$15 billion deployed"** — false attribution. Permanently banned.
- **"great point," "absolutely," "you're right," "I'd love to."**
- **"synergy," "leverage" (buzzword), "game-changer," "comprehensive," "robust," "holistic," "In today's market..."**
- **"Welcome back"** in any greeting — replace with honorific.
- **"Stop Claude"** — must not appear in production DOM (current bug).
- **Negative imagery** in LOIs / deal copy — even when factually warranted.
- **"EXPIRED"** as DD timer label — replace with "DD Complete / In Closing."
- **"Distressed real estate"** — frame as "ownership conditions."

The AI rule is the strongest brand rule. Every intelligent capability — document extraction, scoring, climate, tenant credit, scenario modeling, the per-deal concierge — must be branded as *Terminal Intelligence*, *our research team*, or *our analysts*. The competitive moat disappears the moment any external party identifies AI as the source. This rule extends to internal copy, product names, marketing, and even hover tooltips.

02. Hard constraints

22 RULES THAT GOVERN EVERY SURFACE

These constraints emerged from 56+ source documents, the April 24 Investor UX Deep Debate, and the Master Decisions Ledger. None are negotiable at the developer level. If a feature appears to require violating one of these, escalate; do not work around it.

Product identity

#	CONSTRAINT	WHY IT MATTERS
1	Investor side only — no broker portal, no seller financing flow on this surface.	Different products with different audiences.
2	Every deal on the portal is under executed PSA . No speculative listings. No marketplace.	The PSA is the single most powerful institutional positioning signal.
3	Membership is invitation-only. Self-registration is rejected.	Vetting precedes access.
4	Every member sees every deal at the same moment. No timing advantages or preferential access.	One unfairness destroys the community.
5	Pre-PSA visibility is admin-triggered to specific investors per deal — never automatic.	Manual gate; admin panel must support this.

Communication & voice

#	CONSTRAINT	WHY IT MATTERS
6	The word " AI " never appears on any user-facing surface. Ever.	Strategic moat. Logo Research p5, p15.
7	The word " advisor " never appears in any portal copy.	SEC regulatory risk.
8	Member counts are never displayed. No "47 members" or "3 spots left."	Exclusivity is signaled by vetting, not numerics.
9	External names use first name + last initial only (e.g., "Rick D.," "Brian A.").	Privacy, institutional convention.
10	No specific dollar IRR or cap rate figures on public pages.	SEC compliance for non-accredited contexts.
11	Member is addressed by honorific + last name everywhere — never first name alone.	Gulf, Israeli, religious-community trust signal.

UX architecture

#	CONSTRAINT	WHY IT MATTERS
12	Kahneman System 2 before System 1 : analysis, data, financials precede countdown timers and commitment buttons.	If urgency precedes analysis, decisions are worse.
13	3-feature maximum per persuasion argument (Anderson's averaging principle).	Weak features dilute strong ones.
14	Onboarding follows Fogg progressive disclosure: first login → one featured deal, second visit → one data room, third visit → full board. Never 47 deals on first login.	Cognitive load management.
15	Body text 16px minimum, line-height 1.45, generous padding. No walls of small print.	Dyslexia accommodation.
16	Notification defaults are all ON . Member opts out, not in.	Thaler default effect (37–50pp adoption lift).

Operations & security

#	CONSTRAINT	WHY IT MATTERS
17	Platform pauses fully on Shabbat and Jewish holidays (Chabad). Religious Calendar Parity Protocol extends pause to Eid al-Fitr, Eid al-Adha, Christmas, Easter.	Trust signal across faiths. Zero-Harm Engagement Principle.
18	Standard deposit on all locked deals: \$50,000 via Bruce Smoler / First American Title escrow.	Standard execution language; cited on every wire surface.
19	Anti-wire-fraud notice surfaces on every wire instruction. "RePrime Terminal will NEVER change wire instructions by email."	CRE wire fraud is endemic. Notice is itself a sophistication signal.
20	Session timeout 30 minutes; graceful close with honorific ("Dr. Cohen, your session has ended for security"). IP anomaly triggers verification.	Institutional baseline. Crexi/LoopNet weakness.
21	Dynamic per-page watermarks (member name + email + timestamp) on every financial / legal data-room PDF. View-only via react-pdf. No download.	IP protection and audit trail.
22	Three withdrawn commitments in 6 months → removal. NDA violation → immediate removal, no second chance.	Trust enforcement; protects the small community.

03. Information architecture

SURFACE MAP OF THE ENTIRE INVESTOR JOURNEY

The investor journey is linear from invitation to commitment, with three lateral surfaces accessible at any time (Notes, Direct Line, Deal Concierge). Every page belongs to one of seven primary zones below.

SURFACE MAP · INVESTOR JOURNEY

Solid green border = LOCKED for launch. Gold dashed = PHASE 2 destination. Solid navy = standard surface. Lateral surfaces appear on every page.

04. Investor Gateway

LOGIN · REGISTRATION · ACCREDITATION · TIER ANCHORS

The Gateway is the first interface an invited investor sees after clicking the email from Adir. It carries the heaviest first-impression weight in the entire product. The honorific dropdown comes first; nothing on the platform addresses a member by first name alone after registration.

Three steps

STEP	SURFACE	REQUIRED FIELDS & BEHAVIOR
1	Identity	Honorific dropdown (Mr. · Mrs. · Ms. · Dr. · Prof. · Eng. · Gen. · Amb. · H.E. · Sheikh · Rabbi · The Hon.) — mandatory . First name. Last name. Email. Phone (optional). Country.
2	Tier anchor + accreditation	Three-card display (\$30K Founding Associate · \$75K Founding Principal · \$100K+ Founding Institutional). Cards are anchors, not selectors. Two checkbox attestations: accredited investor + qualified purchaser. Adir's name and title appear here as the named human.
3	Welcome cinematic	Founding Member reveal. Personal message from Gideon (signed). One featured deal walkthrough with two gold callouts teaching path-rail and Tier-A metrics. Skip available.

GATEWAY · STEP 1 MOCKUP (IDENTITY + HONORIFIC)

REPRIME · TERMINAL

EN | HE | AR

STEP 1 OF 3 · IDENTITY

Welcome to the Terminal.

Your invitation has been verified. Please confirm your details.

HONORIFIC

Dr. ▼

FIRST NAME

Reuven

LAST NAME

Cohen

EMAIL

r.cohen@migdal.co.il

COUNTRY

Israel ▼

From the moment you continue, the Terminal addresses you as Dr. Cohen. Always

CONTINUE →

Honorific is the first form field, mandatory, dropdown. The list is ordered to put Mr/Mrs/Ms/Dr/Prof/Eng first (most common), then military/diplomatic/religious (Gen/Amb/H.E./Sheikh/Rabbi/The Hon.) — the latter group is non-negotiable for Gulf, Israeli religious, and diplomatic relationships.

Locked behaviors

- **Social login** (Google · LinkedIn · Microsoft) supported alongside invitation code path.
- Three-step membership application flow.
- Tier cards are **anchors, not gates** — psychological anchoring of value, not actual tier selection at the form.
- Adir's name and title (VP Investor Relations · Israel & International Capital) appear on Step 2 as the named human.
- Invitation code path → cinematic "Welcome, Founding Member" reveal, then routing to `/terminal`.
- Accreditation gate via two attestation checkboxes; vendor decision (VerifyInvestor.com vs Parallel Markets) is OPEN — see §19.
- EN | HE | AR language toggle visible top-right; flags are **not** used (politically charged for this audience). Language names only.

Anti-pattern killed. Empty EN/HE toggle on demo artifacts was rejected — empty toggle is worse than no toggle. If the language string library is not yet translated for a given locale, hide the toggle for that locale rather than show an empty fallback.

05. Dashboard

THE HOME SURFACE · TICKER · ACTIVE DEAL CARD V8 (THE SHOWPIECE)

The dashboard is what an existing member sees on every login after the Welcome Cinematic has been completed. It carries: a live macro ticker at the very top, the navigation bar with honorific pill, the Active Deals grid (the centerpiece), Coming to Market section below, and Completed Transactions section last.

Layout — top to bottom

ZONE	CONTENT	STATUS
Top bar	RePrime · TERMINAL wordmark · primary nav (Dashboard · My Deals · Track Record · 1031 Club · Live Lab · Account) · honorific pill ("Dr. Cohen") · Currency toggle · Language toggle	LOCKED
Live Ticker	10-Yr UST · SOFR · CPI · Cap Rate Index. Pulled live from FRED API. Scrolls.	BUILD NOW — currently hardcoded
Greeting	"Good evening, Dr. Cohen." — never "Welcome back."	LOCKED
Active Deals grid	Active Deal Card v8 (see below). 2 cards per row, never 3+. Photo carousels do not auto-rotate.	LOCKED
Coming to Market	Cards appear muted; admin-triggered visibility per investor. No DD timer until PSA executed.	LOCKED
Completed Transactions	Compact tombstone table. Track Record summary panel above (N Completed · \$ Volume · Avg IRR · Avg Days to Close).	LOCKED

No dashboard map. The Investor UX Deep Debate (Verdict 5) explicitly killed dashboard-level maps at the current 13–15 deal volume. Sparse pins contradict the abundance positioning. Threshold to revisit: ≥30 active deals OR ≥50 total deals. Maps live on individual deal pages only.

Active Deal Card v8 — the showpiece

The Active Deal Card is the single most-engineered surface in the Terminal. It survived eight design rounds, an expert color committee (Haller, Aaker, Kolenda, Tufte, Vignelli), and a behavioral economics committee (Kahneman, Tversky, Cialdini, Anderson). The version below is final. **Build to this exactly.**

ACTIVE DEAL CARD V8 · ANNOTATED

① PSA banner
Navy band, gold eyebrow.
Replaces every marketplace urgency cue.

③ TIER A · Returns
Cream-gold strip.
Gold rule above.
IRR/CoC dominant — never both at peak size.

⑤ Live Data · cream
Cialdini authority precedes urgency.

⑥ Unified clock
Single colored banner.
Stage-aware label.
"Total close" badge prevents misread.
Color = stage gradient.

RED PUL

>30 days · 14–30 · 7–14 · 3–7 · <3 · <1 day

② Photo + asset badge
Real photography only.
No auto-rotation.
Value-Add / Stabilized flag bottom-right.

④ Anchor pair
Purchase navy big.
Equity in gold — smaller share, lower friction (Tversky).

Card width 280–320 px on dashboard grid (2 cards per row). Photo 38% of card height with 16:9 crop. Tier-A return strip uses Playfair Display 22pt for the dominant metric (IRR or CoC, whichever is larger; never both peak-sized). Equity-in-gold next to Purchase-in-navy is the single most conversion-relevant decision on the card.

What is forbidden on this card

- ~~DSCR on the card~~ — moved to Financing tab as "Lender Min DSCR."
- ~~7+ visible metrics~~ — degrades scanning. Tier A maxes at 5; Tier B at 5; combined cap.
- ~~4 metrics maximum~~ — insufficient for acquisitions speed-scanning.
- ~~WALT and Price/SF in Tier A size~~ — they belong in Tier B.
- ~~"SELLER FINANCING" pill~~ — banned; use "Small second note" only in broker-facing copy, never on investor cards.

RePrime Terminal · Developer Brief · Apr 29, 2026

12 of 44

- ~~"X members reviewing"~~ social-proof Booking.com pulse — replaced with "3 qualified groups reviewing · 1 meeting scheduled" in the Activity tab, not on the card.
- ~~"EXPIRED"~~ DD timer label — use "DD Complete / In Closing."
- ~~Auto-rotating photo carousel~~ — marketplace urgency, wrong register.
- ~~Pulsing animations on the active stage dot~~ beyond the <3-day red-pulse threshold.

06. Deal Detail Page

PSA BANNER · PATH-RAIL · TABS · PHOTOS · MAP

Click any deal card and the detail page opens. The detail page inverts the marketplace pattern: the **thesis comes first** (three sentences from the team — why this deal, what we are watching, what we need from you), the data follows. Marketplaces lead with photos and metrics; private banks lead with three sentences of context. The Terminal is a private bank.

Top-of-page hierarchy

DEAL DETAIL PAGE · TOP FOLD LAYOUT

Top of page = PSA banner (navy, signed date, escrow attorney with file number) → path-rail (today tracker, 5 future stages visible) → tab strip → greeting + 3-sentence thesis → footer activity. The 3-sentence thesis is the **institutional inversion** — every marketplace audit benchmark fails here because none of them lead with thesis. Without it, the deal page reads as evidence with no interpretation.

Tabs — what each one contains

TAB	STATUS	CONTENTS
Overview	LOCKED	Thesis · hero metrics · photo gallery · Live Data · 3-quote financing snapshot card · CTA row.
Financials	LOCKED	Full pro forma (10-yr cash-flow projection), CoC table by year, levered/unlevered IRR table, exit assumptions, sensitivity matrix.
Financing	LOCKED	3-quote table (Credit Union 6.09% · Bank 6.50% · Bank 6.75%), "Recommended" gold star, "Load into Modeling" CTA, original PDF "View Loan Quote → ", stale-flag if >45 days. See §07.
Data Room	LOCKED	4-level hierarchy. Per-page watermark. Tenant subfolders. NDA gate. See §08.
Modeling	LOCKED	Scenario Lab — 4 sliders (cap exit, hold period, NOI growth, financing rate) with numeric input box on the right of each. Live IRR / Multiple / Exit Value recompute. See §09.
Tenants	LOCKED	Stacking plan (multi-tenant only). FRISK / RapidRatings credit per tenant: STABLE/WATCH/DISTRESS. Lease abstracts (auto-extracted, branded as Terminal Intelligence). See §10.
Location	LOCKED	Mapbox custom navy/gold style. 1-mi/3-mi/5-mi rings. Anchor pins (highways, employers, transit). Below-map strip: Walk Score · Transit · Flood Zone · Submarket. Climate Intelligence (First Street).
Comps	LOCKED	5–10 hand-picked comps. Cap rate distribution dot chart with this deal as gold pulsing dot. Comp table.
Activity	LOCKED	Anonymous Bloomberg-style time-stamped feed: "Group entered data room · 14:32" · "Phase II ESA uploaded · 09:18" · "LOI submitted · Mar 18."
Team	LOCKED	Named humans for THIS deal: Sourcing (Gideon) · DD Lead (Steve) · IR (Adir) · Escrow (Bruce Smoler). Each with role + direct WhatsApp + Cal.com link.
Lock Deal	LOCKED	Three lanes (7-Day Close · Non-Refundable Day One · 30–45 Day Standard) with terms-as-headlines. 72-hour wire-countdown ring. See §15.

Photo carousel — locked behaviors

- Hero photo + 4–6 thumbnail strip beneath. Lightbox on click. **No auto-rotation.** Marketplace urgency is the wrong register.
- Real photography only at production. Stock and AI-generated images are forbidden.
- 8–12 photos minimum per deal.
- Matterport 3D tour link when available (CoStar exclusive moat — but our positioning is "available where genuine," not "everywhere because we paid the platform fee").

Terminal Property Chronicle — flagship Phase 2 feature. A cinematic 1940s → present aerial time-lapse player on every deal page, between the photo carousel and the financial metrics strip. 8–10 frames, 30–40 seconds, ElevenLabs voice narration. USGS + HistoricAerials + Nearmap imagery, BuildFax + ATTOM + Sanborn narrative source. Auto-plays once on page load at 3 seconds per frame, then pauses on current aerial. **PHASE 2**

07. Financing Intelligence

TWO-LAYER FINANCING SURFACE · 3-QUOTE TABLE

Family-office allocators ask "who is the lender, what rate" before "what is the IRR." Crexi has nothing comparable. This is the single biggest sophistication signal on the deal page after the PSA banner.

Two-layer pattern

LAYER	WHERE	CONTENTS
Snapshot	Deal card (dashboard) — between Tier B and Live Data	3 compact rate boxes: Credit Union 6.09% (gold border = best) · Bank 6.50% · Bank 6.75%. Term + monthly payment shown. Click → Financing tab.
Full	Financing tab on deal detail page	Full CommLoan-style structured table. Best quote on cream-gold cell. Lender · Listing Price · LTV · Loan Amount · Program · Rate · Monthly · Recourse · Min DSCR. PDF chip + gold "View Loan Quote →" button.

28 KB · Apr 22 · CommLoan

VIEW LOAN QUOTE →

⚙️ LOAD TERMS INTO MODEL

Status: Indicative → Term Sheet → Commitment. Will display amber stale-flag if generated_date older than 45 days.

Original CommLoan-format quote PDF stays attached for download. The structured table makes data sortable, comparable across deals, and feeds directly into the Modeling tab via "Load Terms into Model." Crexi has no equivalent surface — this is pure differentiation.

Locked behaviors

- Status labels: **Indicative** (gray) → **Term Sheet** (blue) → **Commitment** (green). Visible per-quote.
- Stale-offer flag: amber warning "⚠ Rates may have changed — refresh recommended" if generated_date > 45 days.
- "Recommended" column: navy border + gold star badge "★ Best Fit for Model."
- "Load Terms into Financial Model" CTA pre-populates Modeling tab sliders. Confirm dialog before overwrite.
- DSCR migrates from card to here as "Lender Min DSCR" row.
- The original quote PDF is always downloadable. Number on the table without the PDF source = credibility collapse (Trust/Credibility Analyst, Debate 3).

08. Data Room

4-LEVEL HIERARCHY · WATERMARK · TENANT SUBFOLDERS · NDA GATE

The data room is the most institutional surface on the platform. RealINSIGHT Marketplace's 4-level hierarchy is the gold standard, and it is what we copy with two improvements they lack (per-page watermark, in-browser preview).

Hierarchy structure (4 levels)

LEVEL	EXAMPLE	BEHAVIOR
1 · Category	Leases · Financials · Title · Environmental · Property Condition · Zoning · Insurance · Operating Reports · Service Contracts · Rent Roll · Tax · Misc	Always 12 categories. Order is fixed. Empty categories are hidden , not shown empty.
2 · Subcategory	Leases / Tenants · LOIs · Estoppels · SNDAs	Subcategories appear when a category has them. DD checklist tracks completion: 6 of 8 ✓.
3 · Suite / tenant folder	Tenants / Suite 100 · Wheels Up · Suite 200 · Delta Catering	RI's signature differentiator. Per-tenant sub-folders inside Leases. Each contains lease + amendments + estoppel + SNDA <i>together</i> — eliminates cross-folder hunting.
4 · Document	Lease.pdf · Lease_Amendment_2024.pdf · Estoppel_2026.pdf	YYYY.MM.DD prefix on filenames (LoopNet best practice). Per-file last-updated timestamp visible.

DD checklists by property type

Document expectations are property-type specific. The data room shows progress against the relevant checklist. **Default checklist for launch: Multifamily.** Decision on dynamic checklist swap per property type is OPEN — see §19.

PROPERTY TYPE	DOCUMENTS EXPECTED	SOURCE
Multifamily	56	Acquisition framework spreadsheet
Retail	60	Same
Industrial	38	Same
Office	37	Same
Single-Tenant NNN	27	Same
Mixed-Use	43	Same

Locked security & UX behaviors

- **NDA gate** at first entry per deal. NDA pre-cleared for repeat institutional bidders (RI's exclusive — copy this). Signed NDAs archived in member's account area as "My Signed Agreements."
- **Per-page dynamic watermark** on every financial / legal PDF: member's name + email + timestamp. View-only via react-pdf. **No download.**

- **In-browser preview** via react-pdf — eliminates RI's #1 weakness (download-only).
- **XLSX alongside PDF** for every Rent Roll and Operating Statement (RI gold standard — direct underwriting model import).
- Per-deal document notification toggle (default ON per Thaler).
- Search inside document content (full-text OCR search — universal competitor gap).
- Service contract metadata: assumable / terminable flag (RI exclusive).
- **Knox Mall guard rail**: never display a DD timer or empty checklist on a deal with zero documents. Hide the timer when zero docs uploaded.

What is killed. Flat (1-level) data rooms — Crexi's pattern. Folder-level-only timestamps (RI gap). Document share/forward to external email (universal gap; security risk for our community). The "NEW" badge applied universally (Crexi anti-pattern: defeats the signal). Use "NEW" only on documents added in the last 7 days.

09. Scenario Lab & Comp Library

LIVE UNDERWRITING ON EVERY DEAL

The Scenario Lab is the Modeling tab's centerpiece. Crexi has an inline pro-forma calculator (DSCR/cap/ROI live on page) — Crexi-only differentiator. We match it with four sliders, each backed by a numeric input field for precise control. Live recompute of IRR, Multiple, and Exit Value below the controls.

SCENARIO LAB · SLIDERS + NUMERIC INPUTS

Each slider has both a draggable handle and a typeable numeric input on the right with up/down arrow steppers. Stress-test presets (rate +200bps, NOI -10%, hold +2yr) live as preset chips above the result bar (not shown). Results bar recomputes in <200ms.

Comp Library

Five to ten hand-picked comps per deal — "here is what 8 similar properties traded at." Cap rate distribution dot chart with this deal as a gold pulsing dot. The strongest pricing argument the platform can make.

- Comp table: address · trade date · cap · \$/SF · SF · buyer · source.
- Cap rate distribution chart: x-axis = cap rate, y-axis = comp count. This deal plotted as gold pulsing dot (gentle, not loud).
- Median cap line annotated. Spread vs median called out: "Wheels Up at 8.30% · 120bps wide of Atlanta Class A median 7.10%."
- Comps must be hand-picked by the team — not auto-pulled from CoStar. The judgment is the value.

10. Tenant · Climate · Activity Intelligence

THE SIGNALS NOBODY ELSE SURFACES ON THE DEAL PAGE

The Tenants tab carries credit health and stacking; the Location tab carries climate; the Activity tab carries the anonymous reviewing-now feed. Each of these answers an unspoken fear that family-office allocators carry into every deal.

Tenant Intelligence

TENANT INTELLIGENCE PANEL · MULTI-TENANT RETAIL EXAMPLE

TERMINAL TENANT INTELLIGENCE · IGA PORTFOLIO

7 tenants · 92% NOI-weighted STABLE · auto-pulled FRISK + RapidRatings

Refreshed monthly · Last update April 12, 2026

TENANT	SF	% RENT	LEASE END	CREDIT	FRISK	12-MO TREND
Wheels Up Operations	36,400	62%	Mar 2032	A-	STABLE 8	
Delta Catering Services	8,200	14%	Jun 2030	A	STABLE 8	
Sandy Springs Dental	3,400	7%	Sep 2028	BBB	STABLE 7	
Concourse Pharmacy LLC	2,800	6%	Aug 2027	B+	WATCH 5	
Atlanta Tax Advisors PC	2,400	5%	Dec 2029	A-	STABLE 8	

COMPOSITE VERDICT

7 tenants · NOI-weighted STABLE 92% · One WATCH (Concourse Pharmacy, 6% of NOI). No DISTRESS positions

Refreshed monthly · Last update April 12, 2026

Composite verdict at the bottom is the single number a 3-second scanner needs. Tenant rows surface FRISK score (1–10), credit rating, and 12-month trend sparkline. Watch and Distress rows are color-coded; auto-pulled means admin never hand-counts.

Locked spec

- Vendor: **CreditRiskMonitor FRISK** or **RapidRatings**. ~\$8–12K/year via direct API. White-label permitted as "Terminal Tenant Intelligence."
- Refresh monthly. "Last update" date visible.
- STABLE / WATCH / DISTRESS three-state taxonomy. NOI-weighted composite at top.
- Trend sparkline per tenant — 12 months of FRISK score history.
- Stacking plan (multi-tenant only) — graphical floor-by-floor visualization. Single-tenant deals skip this section entirely.

Climate Intelligence

- White-labeled **First Street** data: 4 perils — Flood / Wind / Heat / Wildfire. Severity score 1–10 per peril.
- Lives in Location tab below the map. Branded as **Terminal Climate Intelligence**.
- Surfaces an unspoken fear — international investors evaluate climate risk that domestic OMs rarely disclose.

Activity Feed (anonymous)

- Bloomberg-style time-stamped feed in the Activity tab. Anonymous. No names. No identities.
- Events surfaced: "Group entered data room · 14:32" · "Phase II ESA uploaded · 09:18" · "LOI submitted · Mar 18" · "Title cleared · Apr 4" · "Lender term sheet received · Apr 22."

- Real social proof — three or four reviewers in a 30-member club is meaningful. Booking.com pulse pattern ("47 viewing") is killed forever.
- Honest counts only. "0 reviewing" displays honestly. Never invent or round up. (Tufte's condition for inclusion at all.)

11. 1031 Club

DESTINATION PAGE · TIME-WINDOW MATCHING · QI ROSTER

PHASE 2 · DEDICATED PAGE

The 1031 Club is a destination, not a feature. Investors with active 1031 windows are running a clock — 45 days to identify, 180 days to close. The Terminal becomes the place where they stop shopping and start picking. Inventory is filtered to deals that close inside their window. The QI (qualified intermediary) roster is integrated.

70 DAYS

CLOSES NEAR DEADLINE

Window match: Tight · review QI

QI ROSTER · JCS EXCHANGE · FIRST AMERICAN EXCHANGE · IPX1031

Hero anchors the member's window (37 days remaining). Cards are filtered to deals that close inside the window. Clock pills color-graded by closeness to deadline. Tight-window deals (red pill) trigger advisory review. QI roster integrated as distribution channel.

Locked spec

- Per-member 1031 window stored on profile (start date + 45-day ID + 180-day close).
- Inventory filtered to deals closing within remaining window.
- Identification workflow supports the three IRS rules: 3-property rule · 200% rule · 95% rule.
- Reverse 1031 capability via EAT (Exchange Accommodation Titleholder) — Phase 2.
- QI roster integrated: JCS Exchange, First American Exchange, IPX1031. Member can route directly.
- Two automated alerts: red "identify-deadline approaching" · gold "new-eligible-deal posted."

12. Live Deal Lab

COSTAR-GROUNDED UNDERWRITING WORKBENCH

PHASE 2 · DEDICATED PAGE

The Live Deal Lab is the underwriting skeptic's destination. Four fused layers: CoStar foundation data, live Mapbox with click-through comps, scenario sliders with stress-test presets, and re-tenanting intelligence ("who could lease this 25k box?"). It exists for the family-office analyst who wants to validate the team's underwriting against raw data. Built for the CRE professional who would otherwise build their own model in Excel.

Locked spec

- CoStar foundation: rent comps, sale comps, cap rate trends, vacancy, absorption — all surfaced through the deal page. Branded as Terminal Intelligence.
- Mapbox layer: click-through to neighboring comps, see what traded recently nearby.
- Scenario sliders + stress-test presets ("rate +200bps," "NOI -10%," "hold +2yr") — preset chips above the result bar.
- Re-tenanting layer: "If Wheels Up departs, who could lease 25k of Class A office in Sandy Springs?" — surfaces 5 plausible replacements pulled from active CoStar tenant search history.
- Knowledge graph rendered showing relationships between asset, comps, tenants, and sub-market.
- Independent build prompt has been drafted (separate chat) to spec the full system.

13. My Deals Hub

PIPELINE · WATCHING → CONSIDERING → COMMITTED → CLOSED · TRACK RECORD

The Portfolio tab as it exists today (a thin Withdraw-only duplicate of the dashboard) is killed. The replacement is "My Deals Hub" — a four-stage pipeline where every deal the member has touched lives at one stage.

Four-stage pipeline

STAGE	HOW A DEAL ENTERS	DISPLAY
Watching	Member clicks ★ Watch on dashboard card	Compact card with current DD timer · current Tier-A returns
Considering	Auto-tracked when member opens data room OR writes notes (manual toggle preserved)	Compact card + notes preview (last 60 chars) · documents-viewed count
Committed	Member completes commitment flow · wire pending or wired	Card + position number (#1 primary, #2 backup) · wire status
Closed	Deal funded	Card + closing date + actual returns (only if ≥12 months post-close)

Locked behaviors

- Default view is **list** (institutional convention). Kanban view is a toggle, not the default — Kanban reads SaaS, list reads investment management.
- Stage filters along the top.
- Withdrawal language varies by stage: "Pass" from Watching/Considering; "Decline" from Committed (with typed-confirmation modal).
- Totals bar above pipeline: **Total Equity Committed · Active Deals · Projected Blended IRR · Avg CoC.**
- Realized IRR shown only after 12-month seasoning. Before that: "Hold Period Ongoing — est. return data: [date]."

Track Record (top-nav destination)

- Compact tombstone table — not full deal cards.
- Track Record Summary panel above: **N Completed · \$ Total Volume · Avg % IRR · Avg Days to Close.** Avg Days to Close is the differentiating credibility metric for a PSA-first platform.
- Absolute framing first; projection comparison secondary (smaller gray text).
- ★ icon on deals where the viewing member personally committed.
- Archived deal page (read-only) accessible by clicking deal name.
- Even 6–8 closed deal tombstones at launch is a major trust signal — institutional LPs ask "what have you closed?" before "what's coming?"

14. Direct Line · Deal Concierge · Notes

THREE TRUST LAYERS · ALWAYS ACCESSIBLE · PER-DEAL CONTEXT

The institutional inversion of a marketplace is that humans show up before search does. Three lateral surfaces follow the member across every page: the Direct Line to a named human, the Deal Concierge expert per-deal, and the sticky Notes panel.

Direct Line

DIRECT LINE WIDGET · PER-DEAL

DIRECT LINE · WHEELS UP HQ

Adir Yonasi
VP Investor Relations · Israel & International Capital
Online · responding within minutes

 **CALL ON WHATSAPP**

 **BOOK A 30-MIN CALL**

Web call surfaces in browser tab if Adir online · falls back to direct W

CONVERSATION THREAD · WHEELS UP HQ

Apr 21 · 14:32 — You
Adir, can you confirm the lease abstract for Suite 200 — is the renewal option 1×5 or 2×5?

Apr 21 · 15:08 — Adir
2×5 at FMV with 90-day notice. Lease p.14 sec 7.2. I'll attach the marked-up version to the data room tonight.

Per-deal Direct Line thread — every message tagged to the deal context. WhatsApp call directly from the browser when Adir is online. Falls back to scheduled call via Cal.com Pro on book.reprimeterminal.com when offline. Thread persists across sessions and across deals (filterable by deal).

Locked behaviors

- Web call lights up if Adir is online; falls back to WhatsApp message if not. Cal.com Pro provides scheduled fallback (30-min default, 15-min buffer between meetings).
- Per-deal thread (separate from Notes — Notes is private to the member, Direct Line is a conversation with the team).
- Conversation log is admin-visible. Adir's responses inside the thread are auditable.
- Adir's avatar surfaces on every deal page where he is the assigned IR contact (institutional / Israel / international). Other members may see different team contacts.
- Custom Zoom virtual background (navy + TERMINAL wordmark, 1920×1080) for any video calls. Branded waiting room with "Connecting in a moment" serif italic caption.

Deal Concierge

- Per-deal expert. Knows every document in the data room, every email between Adir and the broker, every Zoom call transcript with the team.
- Branded as **Terminal Intelligence — Deal Concierge**. Never as "AI assistant" or any AI-suggestive language.
- Activates from a small gold quill icon at the bottom-right of any deal page. Opens as a floating panel with conversation history per deal.
- Scoped strictly to the open deal. The Concierge for Wheels Up does not see IGA Portfolio data.
- Member's questions and answers are persistent; appear back on next visit.
- Phase 2: voice-driven Concierge (ElevenLabs). MVP is text-only.

Sticky Notes panel

SURFACE	BEHAVIOR
Desktop	320px floating sidebar on right edge. Persists when scrolling. Collapses to a vertical pill on click.
Mobile	FAB  at bottom-right. Tap → 60% bottom sheet rises. Three-tag taxonomy + plain text. Send to Team button.
Card-level quick note	 sticky icon in lower-left of every dashboard card. Click → 500-char modal. Orange dot if notes already exist.
Notes Dashboard	Cross-deal summary view in My Deals Hub. PDF + Excel export both mandatory.

Locked spec

- Three-tag taxonomy at MVP: **Question for Team · Personal Observation · Red Flag**. Rich text deferred to v1.1.
- Notes archived (never deleted) when deal closes. Institutional buyers reference closed-deal notes for years.
- Row-level security at the database level — not just UI-filtered. "Send to Team" creates a copy in a separate team inbox; the member's note copy stays private.
- PDF + Excel export both mandatory.
- Note attaches to deal context — Hypothesis-style contextual annotation, never a separate notepad divorced from context.

15. Deal Lock & Wire

THREE LANES · 72-HOUR WIRE RING · BACKUP BUYER QUEUE

Deal Lock is the commitment surface — System 1 finally takes over from System 2. The page presents three named execution lanes (terms as headlines, not group names), the wire-countdown ring activates when a lane is selected, and the backup buyer queue is transparent.

Three lanes

LANE	HEADLINE TERM	SUBHEAD	WHEN CHOSEN
1 · Speed	7-Day Close	50% of determined value · 24-hour to close	For sellers; investor side reads as "Rapid Conviction."
2 · Standard	Non-Refundable Day One	\$50K hard, immediate. Locks deal at PSA execution.	Most common allocation lane. POF required.
3 · Institutional	30–45 Day Standard (most active)	\$50K refundable through DD. Funds within standard timeline.	Default for \$1M+ commitments. Backup queue activates.

Three additional lanes (Group 4 Traditional with financing contingency · Group 5 Premium Institutional · Speed Priority for sellers) are tracked in the deeper architecture but do not surface to the investor as primary choices. The terms sell, not the group names.

Wire confirmation flow — locked

- 72-hour countdown ring activates on commitment. Circular gold ring fills as time elapses.
- If wire arrives within 3 days → deal locks. If not → deal releases to backup buyer (transparent queue).
- **Anti-wire-fraud notice** on every wire instruction: "RePrime Terminal will NEVER change wire instructions by email. Confirm any change with Adir Yonasi by phone before sending funds." This notice is itself a sophistication signal.
- Cinematic confirmation: gold particle confetti at successful lock. Sealed-stamp animation reveal. Brief, not gaudy — institutional register.
- Backup buyer queue position (#1, #2...) shown to backup committers. Transparent.
- Standard deposit language on every wire surface: **\$50,000 held in escrow by Bruce J. Smoler, Esq. — Smoler & Associates, P.A. — Licensed Title Agent authorized by First American Title — 2611 Hollywood Blvd, Hollywood, FL 33020.**

Locked governance

- Three withdrawn commitments in 6 months → automatic removal from the platform.
- NDA violation → immediate removal, no second chance.
- Direct seller contact → immediate removal.
- First deposit locks the deal. Every member sees every deal at the same moment (exception: \$10M+ blind-pool members get first look on GP deals).

16. Tear-Sheet PDF Export

ONE-PAGE DEAL SUMMARY · IC-PRESENTABLE

Every deal must produce a one-page tear sheet — the file the member emails to their IC. The tear sheet is the platform's reach beyond the platform.

TEAR SHEET · LANDSCAPE · US LETTER

One-page landscape US Letter. Hero photo + 4 hero metrics + Purchase/Equity anchor pair + path-rail mini-strip + DD status + financing summary + watermark footer with viewer name/email/timestamp. Same dynamic per-page watermark as data room PDFs.

Locked spec

- Mandatory immediate at MVP. Print-friendly CSS view on every deal page (browser-native print-to-PDF).
- Verify existing Financial Model Excel export; add deal metadata header (deal name, date, viewer).
- Compare View PDF export — side-by-side table of selected deals, all 6 Tier-A/B metrics, timestamp.
- Notes Dashboard PDF export (grouped by deal, tagged, timestamped) + Excel export (flat table: deal · date · tag · note text).
- Portfolio Tab PDF export — Total equity committed · active deals · projected blended IRR · individual deal list.
- Footer attribution required: **"Source: RePrime Terminal."** If brokers circulate Terminal data, attribution is mandatory.

17. Notifications minimal

WHATSAPP + DAILY DIGEST ONLY AT LAUNCH · FULL SYSTEM PHASE 2

Notification fatigue is a known killer of investor portals. Crexi's universal "NEW" badge is the cautionary tale — applied so widely that the signal is gone. Launch with the minimum that works.

Launch — locked

- **WhatsApp:** instant alerts on three events only — new deal posted · DD timer enters <3-day red-pulse stage · wire confirmation. Every member opt-in default ON (Thaler).
- **Daily digest email:** 7am local time delivery (timezone-aware). Sections: New Deals · Deals You Watch · Deals Approaching Decision · Closed Deals (when applicable).
- **In-product notification panel:** grouped Today / This Week / Older (RealINSIGHT pattern, the cleanest categorization observed).
- Smart timing per member timezone. Honor 24/6 Shabbat pause and Religious Calendar Parity Protocol — no notifications send during pause windows.

Phase 2

- SMS as fallback channel.
- Slack for institutional accounts that prefer Slack to WhatsApp.
- Per-event notification controls (granular).
- Calendar invites push directly to member's Outlook / Google / Apple Calendar for DD deadlines, IC presentations, closing dates.
- Pre-PSA "preview" alerts to specific members (admin-triggered).

18. Honorific system & multilingual

"DR. COHEN" EVERYWHERE · DEEPL PRO · EN/HE/AR PHASE 1

The honorific system is the single highest-ROI cultural signal the Terminal can carry. For Gulf, Israeli religious, diplomatic, and military relationships, addressing a member by first name alone — or worse, "Hi Reuven" — is unprofessional. The dropdown at registration enforces it.

Honorific dropdown — mandatory at registration

GROUP	OPTIONS	DISPLAY RULE
Standard	Mr. · Mrs. · Ms. · Dr. · Prof. · Eng.	"Dr. Cohen"
Military	Gen. (Brig. · Maj. · Lt. abbreviations available in expanded list)	"Gen. Sitbon"
Diplomatic	Amb. · H.E. · The Hon.	"H.E. Al-Maktoum"
Religious	Sheikh · Rabbi	"Sheikh Al-Rashid," "Rabbi Goldberg"

The system addresses members by honorific + last name everywhere after registration. Greetings, emails, notifications, the Concierge — all of it. Never "Hi [first name]" alone. Never "Welcome back."

Multilingual

PHASE	LANGUAGES	NOTES
1 · Launch	EN · HE · AR	Hebrew RTL via Almoni Neue. Arabic RTL via standard system stack. CRE financial terms (IRR, LOI, NOI, DSCR, cap rate, NNN, PSF, GLA, UPB, EBITDA) always remain in English regardless of surrounding language.
2	FR · RU · ES	French for European institutional. Russian for diaspora capital. Spanish for LatAm.
3	ZH · PT · DE	Mandarin (after Outbound Investment Security review for COC compliance). Portuguese for Brazil. German for DACH.

Locked spec

- Translation engine: **DeepL Pro**. Pre-translated string library at deploy, not runtime translation.
- Hebrew uses **Almoni Neue** typeface. Full RTL layout reflection — not just text direction; mirror the entire layout for HE/AR.
- Language switch lives top-right of nav. **No flags** — politically charged for this audience. Display as "EN" · "ع" · "עב."
- If a string for a given locale is missing, fall back gracefully to English. **Never display the empty toggle** — better to hide the language entirely than to render an empty fallback.
- Hebrew product domain: reprimepro.co.il. Configured but not yet implemented in artifacts.

19. Open decisions awaiting Gideon

DO NOT ASSUME — THESE NEED EXPLICIT FOUNDER INPUT BEFORE BUILD

Process rule. Each open decision below blocks at least one piece of work. Bring the decision to Gideon as a single question with 2–4 dropdown options (per his communication preference). Do not build in either direction until decided.

#	DECISION	WHY IT MATTERS · WHAT'S BLOCKING	OWNER
1	Adir's WhatsApp number for Direct Line widget	Component is built but the production WhatsApp Business number is not yet routed. Cal.com Pro URL also pending (book.reprimeterminal.com is the planned host).	Adir Yonasi
2	Tenant credit vendor: FRISK (CreditRiskMonitor) vs RapidRatings	\$8–12K/yr each. FRISK is industry-default for retail/multifamily; RapidRatings stronger for industrial. Affects API integration and price.	Gideon · Steve
3	Sub-market data primary: Reonomy vs Sayari vs Trepp	Comp library and Live Deal Lab depend on chosen vendor. Different price points and different data densities.	Gideon · Steve
4	Foot traffic vendor: Placer.ai (\$5–15K/yr) vs Near.com	Live Data feed source. Placer is institutional-default for retail; Near is broader.	Gideon
5	Accreditation verification: VerifyInvestor.com vs Parallel Markets	Both pass-through cost. VerifyInvestor is industry-default; Parallel Markets has a more polished UX. Affects Gateway Step 2 build.	Adir · Bruce Smoler
6	Custom Mandate: launch vs Phase 2	Members enter target cap range, geography, asset type, ticket size — Terminal alerts when matching deals appear. Major sophistication signal but requires admin matching workflow.	Gideon
7	Annual Member Report timing	Single PDF per member with realized returns across closed deals + relationship summary. Timing decision: end-of-year vs anniversary-of-membership. Affects template and delivery cadence.	Gideon · Adir
8	Terminal Property Chronicle: launch vs Phase 2	Cinematic 1940s → present aerial time-lapse on every deal page. Spec is locked but build cost is non-trivial (USGS + HistoricAerials + ElevenLabs + animation engine).	Gideon
9	Tier badge display: universal vs tier-aware	Should every member's view show the same content (universal) or should Founding Institutional members see tier-locked features (tier-aware)? Affects role-based access architecture.	Gideon
10	Logo direction: A (cursor-rejected) · B (classical-serif rejected) · C (meridian rejected) · D (new direction TBD)	Three previous directions rejected. Logo Research Brief's seven-layer protocol still in progress. Production tool decision (AI generator vs vector vs human commission) pending.	Gideon · external designer
11	Data Room dynamic checklist swap per property type	Default at launch is Multifamily (56 docs). Should the checklist swap automatically to property-type-specific (Retail 60, Industrial 38, Office 37, NNN 27, Mixed-Use 43), or stay Multifamily and let admins handle exceptions?	Gideon · Steve
12	4,154-broker database location	Email Machine warm-reconnect target list. Multiple Drive searches failed to locate. Without it, Email Machine warm-reconnect cannot launch. Search of Steve's drives or local backup needed.	Steve · Shirel
13	"Deal locked in" confirmation interstitial	Between commitment confirmation and the wire flow — share-link options, report copy. Identified as open during front-end build but not yet specified in detail.	Gideon
14	Hebrew/RTL implementation timing	Scoped in \$18 but not yet implemented in artifacts. Decision: ship at launch (delay launch ~2 weeks) or Phase 1.1 (launch English-only, ship Hebrew within 30 days).	Gideon · Shirel

15	Onboarding email automation	How does the "1 deal first login → 1 data room second visit → full board third visit" Fogg pattern get triggered — manual admin orchestration or automatic?	Gideon · Shirel
16	Deposit escrow scaling above \$50K	\$50K is standard. For \$1M+ commitments, does deposit scale (e.g., 5%) or stay at \$50K flat?	Gideon · Bruce Smoler
17	Capital Partner deposit pool structure	Phase 2 feature. Pre-funded pool that auto-allocates to deals member commits to. Legal structure (LLC, Trust, individual escrow) requires Bruce's review.	Bruce Smoler
18	Voice for Property Chronicle narration	ElevenLabs voice characteristics: pitch, accent (American institutional vs British editorial), pace. Affects brand register.	Gideon
19	Compare upgrade scope	Cap rate trend overlay, risk radar chart, sensitivity toggle, financing scenario comparison — all decided as Phase 2. Question: which (if any) ship at launch as a more limited Compare?	Gideon
20	Pre-PSA admin visibility per investor	Specified as admin-triggered manual gate. Question: does admin panel surface this as a per-deal-per-member matrix toggle, or per-deal-with-included-list?	Steve

20. Killed items reference

DO NOT REBUILD THESE. THEY WERE CONSIDERED, DEBATED, AND REJECTED.

Every item below was explicitly considered and rejected — most during the April 24 Investor UX Deep Debate. They appear here so a developer cannot accidentally rebuild them "because it seems obvious" or "because the proxies have it."

Card & deal page

- ~~DSCR on the deal card~~ — moved to Financing tab as "Lender Min DSCR."
- ~~7+ visible metrics on card~~ — degrades scanning.
- ~~4 metrics maximum on card~~ — insufficient for acquisitions speed-scanning. Six is the locked count.
- ~~WALT & Price/SF at Tier A size~~ — moved to Tier B (smaller).
- ~~Auto rotating photo carousels~~ — marketplace urgency, wrong register.
- ~~Voice "Ask Terminal" modal~~ — contradicts AI-invisibility brand rule.
- ~~Composite Terminal Score number~~ — single number is reductive; replaced with multi-dimensional Live Data feed.
- ~~"EXPIRED" DD timer label~~ — replaced with "DD Complete / In Closing."
- ~~Empty fields and "Pending" buttons~~ — hide what doesn't exist.

Dashboard & navigation

- ~~Dashboard level map at 13–15 deal volume~~ — sparse pins contradict abundance positioning. Threshold ≥ 30 active or ≥ 50 total.
- ~~Member counts displayed~~ — "47 members" or "3 spots left." Ever.
- ~~"X viewing now" pulsing green dots~~ Booking.com social proof.
- ~~Compare view upgrades at launch~~ — cap rate trend, risk radar, sensitivity toggle deferred to Phase 2.
- ~~Onboarding welcome screen~~ — replaced with the cinematic Welcome reveal + first-deal walkthrough.
- ~~Peer Decision Atlas ("X% of investors who reviewed this committed")~~ — too transparent; turns the platform into a horse race.

Brand & copy

- ~~The word "AI" on any user-facing surface, ever.~~
- ~~The word "advisor" in any portal copy~~ — SEC regulatory risk.
- ~~"3,000+ transactions" and "\$15 billion deployed"~~ — false attribution, permanently banned.
- ~~"In today's market...", "leverage," "synergy," "game-changer," "comprehensive," "robust," "holistic"~~ — forbidden marketing jargon.
- ~~"Welcome back" as a greeting~~ — replace with honorific.
- ~~First name alone in any system address.~~
- ~~"Stop Claude" string in production DOM~~ — current bug, must be removed.
- ~~Negative imagery~~ — even when factually warranted.
- ~~"Distressed real estate" framing~~ — replaced with "ownership conditions."
- ~~EN/3V empty toggle~~ — hide the language if strings are not yet present.
- ~~City level location on public pages where SEC compliance requires "sub-market" only.~~
- ~~Fake testimonials~~ — "Michael C., Senior VP, Marcus & Millichap." Any fabricated attribution.

Tech & vendor

- ~~Inter font~~ — replaced with Poppins. Do not import.
- ~~13px body text~~ — minimum is 16px.
- ~~Light 300 weight on metrics~~ — Medium 500 minimum.
- ~~Salesforce CRM~~ — overkill; n8n + Supabase replace.
- ~~Buildout CRM~~ — broker-oriented, not acquisition-oriented.
- ~~Lovable as primary builder~~ — loses context at 30+ components, security flaws.
- ~~Webflow + Memberstack~~ — client-side gating is insecure.
- ~~Softer + Airtable~~ — cannot achieve institutional design quality.
- ~~localStorage / sessionStorage~~ — use window.storage API only with try/catch.
- ~~Air AI~~ — reportedly dead 2025.
- ~~Bland AI~~ — voice quality degrades on long calls.

Investment & deal mechanics

- ~~Preferred return structures~~ on Tier 1 GP Home Runs in early stage — flexible GP splits only.
- ~~Self registration~~ — invitation-only.
- ~~Three tier product model~~ (GP Home Runs / Core Flips / Special Asset Class) — superseded by five buyer groups.
- ~~\$200K standard deposit~~ — replaced with \$50K via Bruce Smoler.
- ~~Mobile native app at launch~~ — responsive web first; native app only if usage demands.
- ~~Track B paid analysis (\$5-10K)~~ at launch — Phase 2; launch with Track A free analysis only.
- ~~Document share/forward externally~~ — security risk for the small community.
- ~~Universal "NEW" badge~~ — Crexi anti-pattern, defeats the signal. Use only for documents added in last 7 days.

21. Build sequence

THREE TIERS · EFFORT · SEQUENCING LOGIC

The build is sequenced in three tiers. Tier 1 is surgical edits to the existing terminal — no new APIs, no new vendor integrations, ships in days. Tier 2 is institutional differentiators — these are what the platform is sold on. Tier 3 is destinations — extra surfaces that compound credibility but are not core to the first 3 deals.

Tier 1 · Surgical edits — 3 to 5 days

#	ITEM	EFFORT	SOURCE DECISION
T1.1	Add PSA banner to every active deal card and to deal detail page header	0.5 day	§02 #2 · LR p3
T1.2	Replace existing DD timer label "EXPIRED" with stage-aware (DD Active / DD Complete / In Closing)	0.5 day	Handoff Brief Decision · §05
T1.3	Implement Tier-A / Tier-B metric hierarchy on cards (cream-gold strip, gold rule, IRR/CoC dominant, anchor pair Purchase navy / Equity gold)	1 day	§10A Deep Debate · §05 v8 spec
T1.4	Activate Live Data feed strip (FRED API for UST/SOFR/CPI). Hardcode foot traffic / climate / tenant placeholders pending vendor decision	1 day	§10 · open decisions 2 & 4
T1.5	Replace dashboard map with empty state (or hide entirely until ≥30 deals)	0.25 day	§10E Deep Debate Verdict 5
T1.6	Move DSCR from card to Financing tab as "Lender Min DSCR" row	0.5 day	§10A Verdict 1
T1.7	Build unified clock banner replacing existing DD timer (single colored band, stage-aware label, Total Close pill, color gradient legend)	1 day	§05 v8 spec
T1.8	Ban-string sweep — remove "Stop Claude" from DOM, fix Shirel/Adir name inconsistency, replace any "AI" or "advisor" references found	0.5 day	§02 #6 · #7 · current bug
T1.9	Body text fix: 13px Inter Light → 16px Poppins Regular. Metric weight: 300 → 500	0.5 day	§01 typography
T1.10	Hide empty fields and "Pending" buttons across deal pages	0.5 day	§13 prior handoff

Tier 2 · Institutional differentiators — 2 to 3 weeks

#	ITEM	EFFORT	SOURCE DECISION
T2.1	Tenant Intelligence panel — FRISK or RapidRatings API integration, multi-tenant table, composite verdict, 12-mo sparkline	4 days	\$10 · open decision 2
T2.2	Climate Intelligence — First Street API integration, 4-peril severity, in Location tab	3 days	\$10
T2.3	Foot Traffic — Placer.ai or Near.com API integration, monthly refresh, in Live Data feed	3 days	\$10 · open decision 4
T2.4	Document intelligence — auto-extracted lease abstracts, summary cards in Tenants tab. Branded as Terminal Intelligence	5 days	\$06 Tenants tab
T2.5	Sticky Notes panel — desktop sidebar + mobile FAB + card-level quick note + Notes Dashboard. PDF + Excel export	4 days	\$10B Deep Debate · \$14
T2.6	Financing Intelligence — full Financing tab with 3-quote table, status labels, stale-flag, Load-into-Model CTA	3 days	\$07
T2.7	Exports — Tear Sheet PDF, Compare View PDF, Notes PDF + Excel, Portfolio PDF, print-friendly CSS	4 days	\$16 · \$10D Verdict 4
T2.8	Map upgrade — Mapbox custom navy/gold style, 1/3/5-mi rings, anchor pins, below-map data strip	3 days	\$06 Location tab
T2.9	Admin panel — manual visibility per investor, deal stage controls, member onboarding workflow, Notes/Direct Line audit	5 days	\$02 #5 · open decision 20
T2.10	Scenario Lab — slider + numeric input pairs, live recompute, stress-test presets	3 days	\$09
T2.11	My Deals Hub — 4-stage pipeline, totals bar, replace Portfolio tab	3 days	\$13 · \$10F Verdict 6
T2.12	Track Record — closed deals tombstone table, summary panel with Avg Days to Close metric	2 days	\$13 · \$10G Verdict 7
T2.13	Activity feed — anonymous Bloomberg-style time-stamped events per deal	2 days	\$10 Activity
T2.14	Direct Line widget — WhatsApp Business API integration, per-deal thread, Cal.com Pro fallback	4 days	\$14 · open decision 1
T2.15	Deal Concierge — text-only at MVP, scoped to single deal, persistent conversation per deal-member	5 days	\$14
T2.16	Data Room hierarchy — 4 levels, NDA gate, dynamic per-page watermark, in-browser preview, XLSX alongside PDF	5 days	\$08
T2.17	Deal Lock 3-lane flow — 72-hour wire ring, anti-fraud notice, backup queue, sealed-stamp confirmation	4 days	\$15

Tier 3 · Destinations — 6 to 10 weeks

#	ITEM	EFFORT	SOURCE DECISION
T3.1	1031 Club destination page — window-matching inventory filter, QI roster, identification workflow	2 weeks	\$11 · Phase 2
T3.2	Live Deal Lab — CoStar grounding, Mapbox click-through, scenario presets, re-tenanting	3–4 weeks	\$12 · Phase 2
T3.3	Terminal Property Chronicle — historic aerial player with ElevenLabs narration	3 weeks	\$06 callout · open decision 8
T3.4	Hebrew/RTL — Almoni Neue, full layout reflection, reprimepro.co.il	2 weeks	\$18 · open decision 14
T3.5	Multi-language Phase 1 — DeepL Pro string library for AR alongside HE/EN	1 week	\$18
T3.6	Custom Mandate — member preference profile, alert engine, admin matching panel	2 weeks	open decision 6
T3.7	Annual Member Report — single-PDF generator with realized returns aggregation	1 week	open decision 7
T3.8	Compare View upgrades — cap rate trend, risk radar, sensitivity toggle, financing scenario comparison	2 weeks	open decision 19 · Phase 2
T3.9	Capital Partner deposit pool — pre-funded escrow auto-allocation, legal structure	3 weeks + legal	open decision 17 · Phase 2

22. Technical architecture

STACK · SECURITY · INTEGRATIONS

Tech stack

LAYER	CHOICE	NOTES
Frontend framework	Next.js 15 + App Router	Server components for data-heavy surfaces. SSR for SEO on public pages.
UI library	shadcn/ui	Headless Radix-based; styled with Tailwind tokens; institutional fit.
Styling	Tailwind CSS	CSS variables for the brand tokens (--rp-navy, --rp-gold, etc.).
Database / auth	Supabase (PostgreSQL + pgvector)	Row-level security at DB layer for Notes, Deals visibility, Direct Line threads. Auth via Supabase Auth (server-side gating, no client-side gating).
PDF generation	react-pdf	Per-page dynamic watermark on financial/legal docs. Tear Sheet generation. View-only PDF preview in data room.
Workflow automation	n8n	Self-hostable, unlimited workflows at zero per-task cost. Email Machine orchestration. Alert routing.
Map	Mapbox with custom navy/gold style	Branded tiles. Click-through comps. Better customization than Google Maps.
Calendar	Cal.com Pro on book.reprimeterminal.com	White-label, HTML/CSS customization, \$15/mo. Open-source self-host option.
Voice (Phase 2)	ElevenLabs	Property Chronicle narration. Concierge voice mode.
Translation	DeepL Pro	Pre-translated string library at deploy. Not runtime translation.
Analytics	Self-hosted (privacy-by-default)	No third-party trackers. Member engagement audit only.

API integrations

SOURCE	USE	COST	STATUS
Treasury / FRED API	Live macro ticker (UST, SOFR, CPI, cap rate index)	Free	Build now
CreditRiskMonitor FRISK or RapidRatings	Tenant credit health	\$8–12K/yr	Open decision 2
Reonomy / Sayari / Trepp	Sub-market data, ownership records	varies	Open decision 3
Placer.ai / Near.com	Foot traffic	\$5–15K/yr	Open decision 4
First Street	Climate Intelligence (4 perils)	licensed	Phase 1
VerifyInvestor.com / Parallel Markets	Accreditation gate	per-attestation	Open decision 5
WhatsApp Business API	Direct Line + notification channel	per-message	Phase 1
USGS · HistoricAerials · Nearmap	Property Chronicle imagery	varies	Phase 2
BuildFax · ATTOM · Sanborn	Property Chronicle narrative source	varies	Phase 2
Cal.com Pro	Calendar / scheduled meetings	\$15/mo	Phase 1
Twilio	SMS fallback (Phase 2), secretary voice (Phase 1)	per-use	Phase 1 limited
CoStar	Live Deal Lab foundation data	licensed	Phase 2

Security architecture

- Server-side authentication. No client-side feature gating. Auth validated on every API request.
- Row-level security at PostgreSQL layer for Notes, Deal visibility, Direct Line threads, Member data.
- Per-page dynamic watermarks on financial/legal PDFs (member name + email + UTC timestamp). View-only via react-pdf — no download.
- Session timeout 30 minutes. Idle warning at 28 minutes. Graceful close with honorific.
- IP anomaly detection: flag if active session IP changes country mid-session; require re-auth.
- PIIA + NDA + non-solicitation signed by every team member before Day 1 employment.
- Compartmentalization: no single team member sees the full system. Email Command Center does not see the investor list. Investor Relations does not see the broker outreach list.
- All code in RePrime's repository from day one. IP ownership 100% RePrime.
- Anti-wire-fraud notice on every wire instruction surface.

Real vs. demo data mapping

The current artifacts contain demo data; production needs a clean separation between:

SURFACE	DEMO TODAY	PRODUCTION SOURCE
Active deals	Hard-coded array	Supabase deals table; admin-curated
Macro ticker	Hard-coded values	FRED API live
Tenant credit	Hand-typed	FRISK / RapidRatings API
Member profile	Logged-in mock (Gideon \$100K Institutional)	Supabase auth + members table
Notifications	None	WhatsApp Business + n8n queue + email digest
NDA archive	None	Member account area "My Signed Agreements"

23. Stakeholders

WHO DECIDES WHAT · WHO OWNS WHAT · ESCALATION MAP

Internal team

PERSON	ROLE	OWNS	ESCALATE TO THEM WHEN
Gideon Gratsiani	Founder, RePrime Group	Strategic vision · brand · all open decisions · final go/no-go on every surface	Any decision affecting product positioning, brand voice, or strategic sequencing.
Chaim Abrahams	CEO & Co-Founder	Legal · investor relations · governance · SEC compliance posture	Anything touching securities law, member governance, or external partnerships at the principal level.
Adir Yonasi	VP Investor Relations	Direct Line surface · institutional onboarding · Israel/international capital · meeting cadence	WhatsApp routing, Cal.com URL, member-facing copy on Direct Line, Gateway Step 2 contact details.
Shirel Ben-Haroush	Partner, Israel operations	Pipeline app · post-closing transitions · Email Machine flagged drafts review (Tier 1)	Operational workflows, hiring, deal-day-to-day. Education entity.
Steve Philipp	AI & Tech Lead	Build execution · admin panel · Email Machine technical · vendor selection support	Technical scoping, API selection between vendors, Phase 2 prioritization.
Yaron Sitbon	Israel operations · institutional relationships	Israeli institutional capital pipeline (IBI, Migdal, Harel)	IBI Investment House and Israeli sovereign capital introductions. yaron@reprime.com.

External counsel & vendors

PERSON / FIRM	ROLE	NOTES
Bruce J. Smoler, Esq.	Closing attorney · escrow agent · Smoler & Associates, P.A. · Licensed Title Agent authorized by First American Title	2611 Hollywood Blvd, Hollywood FL 33020. Holds all \$50K deposits. Standard language on every LOI and wire instruction surface.
Motty Stone, Esq.	Buyer's transactional attorney · Windy City Law Group	mstone@windycitylawgroup.com. Personal friend; communicates via WhatsApp informally. Reviews PSA flags (e.g., 7 flags on Florida Retail Portfolio Mar 5+).
QI Roster	1031 Club qualified intermediaries	JCS Exchange · First American Exchange · IPX1031.
External designer	Logo direction (open decision 10)	Three rejected directions on file. Seven-layer research protocol still in progress per Logo Research Brief.

Beta testers

- Primary: Gideon Gratsiani (founder).
- Internal team (7): Steven Philipp, Shirel Ben-Haroush, Chaim Abrahams, Adir Yonasi, Guy, Eyal, Gideon.
- External counsel: Motty Stone, Bruce Smoler, Neil Bane (mortgage broker), Ray Turchi (Marcus & Millichap).
- External beta tester: documented as Agent 4 in Florida State Trust beta-invitation emails (April 21 and April 28).

Active deal pipeline (operational context for developer)

DEAL	STATUS	STAGE
Florida Retail Portfolio	Highest priority active deal	PSA executed Mar 5; 7 flags under Motty review; ~\$25M.
Bay Valley Shopping Center	Status uncertain	LOI / negotiation phase per Status Report; outcome pending.
Morton Illinois	Status uncertain	LOI sent (Format 1 — aggressive anchoring); outcome pending.
Frayser Village Shopping Center	Status uncertain	Format 1 dual-offer LOI; outcome pending.
Magna Electronics	Postponed indefinitely	Christopher Guida (B+E / tradenetlease.com); risk assessment produced; secondary priority.

Closing notes

FINAL REMINDERS BEFORE YOU START WRITING CODE

This brief is the consolidated output of nine months of design conversation, six months of Master Decisions Ledger compilation, multi-persona expert debates, and a four-day forensic intelligence review of three competitive proxies (LoopNet/Ten-X, RealINSIGHT Marketplace, Crexi). It is the developer's source of truth for the investor portal surface only.

Hard rules to keep in working memory:

1. Investor side only. Broker portal is a separate product.
2. Every deal under executed PSA. The PSA banner appears on every active card and every deal page.
3. The word "AI" never appears on any user-facing surface. Use "Terminal Intelligence."
4. The word "advisor" never appears in copy. SEC regulatory.
5. Honorific + last name everywhere. Mandatory dropdown at registration.
6. System 2 before System 1: analysis precedes urgency on every page.
7. \$50,000 deposit standard via Bruce Smoler / First American Title — language locked.
8. Anti-wire-fraud notice on every wire instruction surface.
9. 24/6 platform pause on Shabbat + religious calendar parity protocol.
10. Body text 16px Poppins minimum. Inter is killed. 13px is killed.
11. Six metrics on the deal card — never seven, never four.
12. Purchase price (navy, large) and Equity required (gold, smaller) anchor pair is the single most conversion-relevant decision on the card.
13. No dashboard map below 30 deals.
14. No member counts. No "3 spots left."
15. No first-name-alone greetings. No "Welcome back."
16. Built-in things: Notes (sticky), Direct Line (Adir), Deal Concierge (per-deal expert) — three lateral surfaces.
17. Killed forever: "3,000+ transactions," "\$15B deployed," voice "Ask Terminal," member counts, peer decision atlas.
18. Edit existing artifacts, do not rebuild from scratch.
19. One question at a time when escalating to founder. Never a stack.
20. When in doubt, ask. Do not improvise on rejected items.

Compiled April 29, 2026 · RePrime Group · Commercial Real Estate Investments · reprime.com

This document supersedes any earlier conflicting specification. Build_Spec dated April 29, 2026 is the final arbiter on remaining ambiguity.
