

REPRIME TERMINAL — OPERATIONAL LAUNCH PLAYBOOK

Command Center Document — March 2026

EXECUTIVE OVERVIEW

The Problem in One Sentence

Gideon and Shirel are doing \$30/day work — answering emails, chasing follow-ups, organizing files — instead of doing \$30,000/deal work: closing, negotiating, and building the relationships that make Terminal a legend.

The Solution in One Sentence

Hire 13 remote workers across the globe at \$30–\$100/day, organized into 11 specialized departments that follow strict protocol, assisted by AI at every step — and run Terminal as an institutional-grade operation within 90 days for under \$20,000/month.

What This Machine Produces

A broker submits a deal. Within 2 hours, they receive an institutional-grade analysis report that looks like it came from CBRE or Cushman & Wakefield — branded, detailed, comprehensive. They've never seen anything like it from a buyer. They remember us. They send us deals first, before anyone else.

An investor applies for Terminal membership. They go through a live verification call — not a PDF, not a form. A human confirms their capital, their track record, and their ability to close. When they're approved, they enter a club where every member has been vetted the same way. They trust the club because the club earned it.

Meanwhile, the Outreach Engine is contacting 5,000+ brokers per month, scanning 300+ auction sites daily, monitoring every bankruptcy filing, every maturing loan, every lis pendens in our target markets. The machine doesn't wait for deals — it hunts.

Behind all of it, every human action is feeding a department-level AI memory system — a

Shadow Brain — that learns from every email drafted, every deal analyzed, every call summarized. The day those systems connect, Terminal runs itself. But today, the humans ARE the machine, following the same protocols the software will eventually enforce.

Total cost to run this: **\$14,000–\$21,000/month** operational, plus a one-time **\$10,000–\$16,000** front-end build. One closed deal at 1.5% on a \$10M property covers the entire year.

The Eleven Departments at a Glance

#	Department	What It Does	People	Monthly Cost
A	Email Command	Every email triaged and answered within 30 min. Rejection Engine turns every “no” into a relationship deposit.	2	\$1,300–\$1,800
B	Personal Ops	Gideon’s hands, Shirel’s hands, Chaim’s hands. Calendar, briefings, drafts, CRM. The bridge between their brains and the machine.	3	\$2,600–\$3,600
C	Phone & Relationships	The schmoozy caller with the AI Question Book and real-time AI coaching. Broker calls, outbound relationship building, deal qualification.	1	\$1,300–\$2,400
D	Data Intelligence	CoStar pulls, county records, market data, auction site monitoring. Raw data in, structured package out.	2	\$1,300–\$2,200
E	Financial Analysis	Runs RePrime’s models: NOI, cap rate, IRR, DSCR. Writes the 1-page recommendation.	1	\$1,100–\$2,200
F	Report Production	Turns analysis into branded institutional PDFs worth \$1,000+. The report is the product.	1	\$880–\$1,800
G	Outreach Engine	Cold email campaigns, broker reactivation, direct-to-owner outreach, LinkedIn presence. Fills the pipeline.	1	\$880–\$1,800
H	Market	Monitors distress signals: bankruptcies, defaults, maturing loans, tax delinquencies.	1	\$660–

	Surveillance	The early warning system.		\$1,200
I	Investor Distribution	Manages the investor club, membership vetting, deal distribution via the Integrity Protocol.	1	\$880–\$1,800
J	QA & Shift Management	The Shift Lead. Manages all workers, handoffs, quality metrics. Without this hire, Shirel becomes the manager of 12 people instead of closing deals.	1	\$2,000–\$3,000
K	Front-End Dev (Temp)	Builds the portal, dashboards, and report engine. 12–16 week project.	2	\$10K–\$16K total

Total: 13 permanent + 2 temporary developers

The Bottom Line

Item	Monthly	Annual
Operations (13 people)	\$12,900–\$21,800	\$154,800–\$261,600
Tools (Smartlead, CoStar, Apollo, etc.)	\$2,000–\$4,500	\$24,000–\$54,000
Front-end build (one-time)	—	\$10,000–\$16,000
Year 1 Total		\$188,800–\$331,600

Revenue needed to cover Year 1: two closed deals. One transaction coordination fee of 1.5% on a \$10M deal = \$150,000. Two deals and the entire machine is paid for. Everything after that is profit building on a platform that gets more valuable every month.

The Timeline

Weeks 1–4: Hire the Shift Lead, 2 Email Commanders, Gideon’s PA, Shirel’s PA. Get the inbox under control. Get Gideon and Shirel free from \$30/day tasks.

Weeks 5–10: Add the Phone Operator, Data Intelligence, Financial Analyst, Report Producer. The assembly line goes live: deals come in → data pulled → analyzed → reported → delivered to broker in hours.

Weeks 7–14: Developers build the portal. Outreach Engine launches. Market Surveillance begins monitoring. Pipeline starts filling from both sides — inbound submissions and outbound hunting.

Weeks 15–20: Investor Portal live. Membership model activated. First paying members onboarded through live verification.

By Week 24: Full operations. 50+ broker submissions/month. 5+ deals entering investor portal. 10+ vetted members. Revenue flowing. This is the proof of concept that opens the door to the \$50M partner conversation.

The Membership Model — The Integrity Tax

Terminal doesn't work for any investor. Terminal works for the DEAL. The membership fee keeps it that way. No investor's money influences which deals get attention.

First 6 months free — but with real vetting (live verification call, independent capital confirmation, behavioral monitoring). At month 6, the investor pays to KEEP what they already have. Loss aversion does the selling.

Year 1–3: \$10K–\$50K annually depending on tier. Year 4+: \$100K–\$5M as the platform's value compounds. Members who joined in the first 3 years are grandfathered at their entry price for life. They'll never leave, and they'll be Terminal's loudest evangelists.

Deals distributed by protocol — not by who paid more. Every member in a tier sees every qualifying deal at the same moment. Higher tiers see deals 24 hours earlier. The speed advantage is the product. In distressed CRE, the first credible offer wins.

The Shadow Brain — Why This Becomes a \$50M+ Asset

Every department gets its own dedicated AI memory system that learns from every human action. Not a chatbot — a growing intelligence layer.

The Email LLM learns 5,000 broker interaction patterns. The Analysis LLM absorbs 500 deal quality judgments with reasoning. The Phone LLM stores every call transcript, every broker personality profile, every negotiation tactic that worked.

Workers don't know they're building it. They just follow protocol and keep records. But the data structure is designed from day one so that when we connect these systems, Terminal has the only proprietary CRE intelligence dataset on earth.

Manual operations aren't a stopgap. They're the data collection phase that creates an insurmountable moat.

CHAPTER 1: THE DEPARTMENTS IN DETAIL

Department A — Email Command Center

Mission. Every email answered within 30 minutes during business hours, 2 hours off-hours. Every email tagged, categorized, and routed. No email lost. No broker ghosted.

Reports to: Shirel, via the Shift Lead.

Headcount: 2 workers covering 16–18 hours/day combined.

How it works. The Email Commander checks the shared inbox every 15 minutes. They categorize: Deal Submission (routes to Data Intelligence), Broker Follow-Up (routes to Phone Ops), Investor Inquiry (routes to Adir), Administrative (handles directly), Spam (archives with tag).

For deal submissions, the acknowledgment is immediate — but it's not a cold auto-reply. The system acts like it KNOWS the broker. "Welcome back — this is your fifth submission. I see the property on Oak Street sold for \$2.7M, nice result. Our research division is reviewing this one now. Expect your report within 72 hours." The Email Commander pulls this from the broker's CRM profile and their deal history. Every touchpoint feels personal.

The Rejection Engine. 95% of deals don't fit. Every rejection goes out personalized: "We reviewed 123 Main Street. At the current cap rate of 6.2%, it's above our threshold for this submarket. If you have anything in the 8%+ range or any seller open to creative structures — seller financing, master lease, assumption — we want to see it immediately." That turns every NO into a relationship deposit that brings the broker back with the right deal next time.

AI workflow. The Commander pastes the incoming email plus the broker's CRM profile into AI. AI drafts the response. Commander reviews, adjusts tone, sends. Over time, the department's Shadow Brain LLM has seen thousands of emails and can draft 80% of responses autonomously — the Commander becomes a QA layer, not a writer.

Vetting test. 10 sample emails (deal submissions, broker questions, investor inquiries, spam). 45 minutes. Candidate must triage all 10, draft responses, tag them. Evaluated on: speed, triage accuracy, response quality, institutional tone, and whether they used AI effectively.

Department B — Personal Operations

Mission. One dedicated PA for Gideon, one for Shirel, one for Chaim. They become extensions of their principal — calendar, follow-ups, CRM, drafts in their voice, meeting prep.

Reports to: Each PA reports directly to their principal.

The Shirel Shadow Protocol. Before working independently, the PA shadows Shirel remotely for 3–5 days. Screen share. They watch how she processes emails, responds to brokers, organizes deals. They document everything into a “Shirel Playbook” in Notion — her workflows, common responses, decision patterns, contacts. Then they take over the tasks that eat the most of her time first. She reviews for 2 weeks, then spot-checks weekly.

Chaim’s PA is a special case. Chaim’s brain is sharp but the digital interface is a barrier. His PA is the bridge: sits on calls with him, takes notes, drafts what he dictates, finds files, executes tasks he describes verbally. For Chaim, the PA IS the machine interface.

The Daily Briefing. Every morning, Gideon’s PA generates: today’s schedule, pending broker responses, pipeline deals needing attention, and a Broker Dossier for anyone he’s speaking with — who they are, their firm, their market, last 3 interactions, what deals they’ve sent, personal details from past conversations. Gideon walks into every call knowing everything. The machine creates the human touch.

Vetting test. Mock day: 8 calendar invites (some conflicting), 5 emails to draft in Gideon’s or Shirel’s voice (samples provided), 3 follow-up tasks, 1 broker dossier from public info. Evaluated on: organization, voice matching, proactive conflict identification, and attention to detail.

Department C — Phone & Relationship Operations

Mission. The voice of Terminal. Charm, CRE literacy, and the ability to make every broker feel like they’re talking to a senior professional at a top-tier firm. This person builds relationships — not just takes calls.

Reports to: Shirel. **Rate:** \$60–\$100/day — NOT a cheap hire. The voice IS the brand.

The AI Question Book. Before every call, AI prepares a one-page briefing: who they’re calling, what we know, what deals they’ve done with us, personal context from the last Zoom or call, and a prioritized question list ranked “Must Ask / Should Ask / If Natural.” The caller reviews for 5 minutes, delivers it like they’ve been studying this broker for a week.

The AI as Real-Time Coach. During live calls and Zooms, AI listens and feeds intelligence in real time. The broker asks a tough question — the AI suggests the answer. There's a natural pause, the human delivers it smoothly. AI remembers what we offered this broker six months ago, what they countered, why we walked away. The human says it casually: "Last time we were at \$3.2M and you wanted \$3.8M — has anything changed?" Two brains operating as one. The broker sees one sophisticated analyst.

Even better: on Zooms, the AI can suggest a question, the human delivers it, then goes quiet while AI analyzes the response and prepares the follow-up. It looks like a thoughtful, careful professional. The human and AI work the conversation together — AI brings data and memory, human brings warmth and social navigation.

Call types: Inbound broker calls (qualify the deal live), outbound relationship calls (reactivate Gideon's 30-year network), outbound qualification (follow up on submissions needing more info), cold calls to property owners (AI-assisted volume calling for initial screening, human handoff when interest is expressed).

Vetting test. Live role-play with Shirel. Candidate pitches Terminal to a "broker" (played by Shirel), then receives an inbound deal submission call and qualifies it. Evaluated on: warmth, CRE vocabulary, ability to handle pushback, and whether they took notes.

Department D — Data Intelligence

Mission. Raw data on every deal in the pipeline — CoStar comps, county records, market data, environmental screening, demographics, traffic, tenant credit — pulled into a standardized template within 30 minutes of assignment. Plus daily monitoring of the 300+ auction and deal sourcing sites across our 6-tier priority system.

Reports to: Shift Lead. **Headcount:** 2 workers. **Rate:** \$30–\$50/day.

How it works. A deal enters the pipeline. Within 30 minutes, the Data Intelligence worker pulls from a standardized checklist: CoStar (comps, rents, vacancy, absorption, cap rate range), county records (assessed value, tax history, ownership, liens, zoning), and alternative sources (Placer.ai for retail foot traffic, CreditRiskMonitor for tenant credit, PropertyRadar for distress signals, crime data, employment trends).

Everything goes into a standardized template — one per asset type. Designed so the Financial Analyst can pick it up and run numbers without asking a single question.

The scraping operation. Separately, the team monitors the 300+ auction sites daily: Tier 1 (Crexi, CBRE, LoopNet, Ten-X) daily. Tier 2 (DebtX, FDIC, Freddie Mac) 3x/week.

Tier 3 (DailyDAC, Inforuptcy) daily for bankruptcies. Tiers 4–6 weekly. Produces a daily “Deal Feed” for Shirel and Gideon’s morning review. As we scale, the Playwright-based Python agents we’ve already built replace the manual checks.

Vetting test. Property address + CoStar access. 60 minutes to fill the standardized template. Evaluated on: completeness, accuracy, speed, and whether they found something we didn’t ask for.

Department E — Financial Analysis

Mission. Takes the raw data package from Department D and runs RePrime’s investment models. NOI, cap rate, price per unit/SF, IRR scenarios, DSCR, discount to market, creative structure viability. Produces a 1-page recommendation: pursue, reject, or needs more info.

Reports to: Shirel (Tier 1 decisions), Gideon (Tier 2–3). **Rate:** \$50–\$80/day. Requires real financial literacy.

How it works. The analyst inputs data into our customized Excel/Google Sheets model (per asset type). The model calculates automatically — but the analyst INTERPRETS. Does the NOI make sense? Are expense ratios reasonable? Red flags the model doesn’t catch? They write a 1-page summary: property at \$X asking, trades at Y% cap, market comps suggest Z fair value, representing N% discount. Fits / doesn’t fit / could fit with creative structure.

AI workflow. Analyst pastes data package and summary into Claude: “What am I missing? What risks aren’t in the numbers? What creative structures could work?” AI catches: supply pipeline compression, tenant credit deterioration, rate environment impact on exit caps, regulatory risk, and alternative structuring approaches.

Vetting test. Real redacted deal package. 90 minutes to run analysis and write summary. Compared against our actual analysis. Evaluated on: accuracy, interpretation quality, writing clarity, risk identification.

Department F — Report Production

Mission. The institutional-grade branded PDF that goes to the broker. Cover page, property photo, market overview, financial analysis, comp tables, risk assessment, three offers. Navy (#0E3470) and Gold (#BC9C45). Poppins typography. Worth \$1,000+ if the broker tried to produce it themselves — delivered free.

Reports to: Shift Lead. **Rate:** \$40–\$60/day.

Report types — ALWAYS confirmed before building:

- **Buyer Report** — emphasize negatives and risks. Negotiation tool.
- **GP/Flip Report** — emphasize positives with honest negatives. Sales tool.
- **Full Report** — both sides objectively.

The Report as a Marketing Weapon. If a deal doesn't sell through Terminal, the broker keeps the report. They show it to other buyers, use it for refinancing, include it in their marketing. Every report that circulates carries Terminal's branding: "Source: RePrime Terminal." If it's good enough to use, it's good enough to credit. Free marketing that costs us nothing.

The Pre-Preparation Service. Terminal can prepare the analysis package BEFORE the broker creates their own marketing materials. We organize their deal — data, photos, market context — based on their submission. This deepens the dependency and makes Terminal indispensable to the broker's workflow.

Vetting test. Report template + completed analysis + 3 property photos. 3 hours to produce finished report. Evaluated on: visual quality, writing quality, accuracy, completeness.

Department G — Outreach Engine

Mission. Fill the top of the funnel. Broker cold email, network reactivation, direct-to-owner campaigns, bank NPL outreach, LinkedIn presence. Without this, Terminal waits. With this, Terminal hunts.

Reports to: Shirel. **Rate:** \$40–\$60/day.

Tools (already evaluated and approved): Smartlead (\$94/mo, 5,000+ emails/day), Lemlist (\$99/mo, multi-channel), Apollo (\$49/mo, 275M+ contacts), MailReach (\$25/inbox/mo), 7 secondary domains.

Campaign sequences (already designed):

- Broker cold outreach: 4-email, 14-day sequence. Credentials → sample report → founding partner offer → breakup.
- Maturing loan owner: 7-touch, 25-day multi-channel. Property-specific → market data → phone call → LinkedIn → case study → physical letter → breakup.

- Broker reactivation: 10-word email ("Are you still working on distressed CRE deals in [market]?") + 4-email follow-up.

LinkedIn presence. Not advertising. Thought leadership. Weekly posts with institutional analysis — Blackstone-level tone. When someone asks "What is Terminal?" they're told, not sold. Terminal is discovered, not marketed.

Department H — Market Surveillance

Mission. The early warning system. Monitors distress signals 3–6 months before deals hit the market.

Reports to: Shift Lead. **Rate:** \$30–\$40/day.

Daily: DailyDAC (Chapter 11 petitions), PropertyRadar (lis pendens, defaults, tax delinquencies), CMBS watchlist updates.

Weekly: CRED iQ maturing loans (DSCR below 1.20x, 6–18 months to maturity), state foreclosure notices, federal surplus sites.

Ongoing: CreditRiskMonitor tenant FRISK scores, WARN Act layoff filings.

All flags go into a Surveillance Feed in Notion. Shirel reviews daily. Properties meriting outreach route to the Outreach Engine.

Department I — Investor Relations & Distribution

Mission. Manages the investor club. Membership vetting, deal packaging, distribution via the Integrity Protocol.

Reports to: Adir. Supported by 1 Distribution Coordinator (\$40–\$60/day).

The Integrity Protocol. Every deal scored by PROTOCOL before anyone knows which investors are in the club. Scoring is blind: property type, location, cap rate, discount to market, DSCR, distress level. Qualifying deals go to every member in the relevant tier simultaneously. Higher tiers see deals 24 hours before the next tier. No human overrides. No favoritism — not even for \$10M.

Membership vetting — live verification. No PDF proof of funds. Step 1: Application reviewed. Step 2: Live verification call — what was your last deal, when, at what price? What capital is available and where? Can your banker confirm in 48 hours? Step 3: Independent verification — public records, entity check, attorney/banker confirmation.

Department J — QA & Shift Management

Mission. The Shift Lead runs the machine. Manages all workers across all departments, ensures handoffs, QAs output, tracks metrics, resolves escalations, reports to Shirel daily. This is the MOST IMPORTANT HIRE. Without this person, Shirel becomes the manager of 12 remote workers.

Reports to: Shirel. **Rate:** \$80–\$120/day. Must have BPO or remote team management experience.

Daily standup (15 min, Slack video). All workers check in. Yesterday's output, today's priorities, blockers.

Shift handoff (7 min per handoff). Loom video: current tasks, pending items, issues, context. Incoming worker confirms receipt in #shift-handoff.

Quality metrics: Email response time (<30 min), data package completion (<2 hrs), report production (<4 hrs), outreach deliverability (>95%), First Time Acceptance Rate (work accepted without rework).

Gold standard testing. Periodic fake tasks with known correct answers inserted into the workflow. Workers don't know which tasks are tests. Calibrates quality objectively.

Department K — Front-End Development (Temporary)

Mission. Build the portal. 2 developers, 12–16 weeks. Steve provides the WHAT. Shift Lead or fractional tech lead manages the HOW.

Stack: Next.js + React + shadcn/ui + Tailwind CSS + Supabase. No connectors. No automation. Supabase stores the data. Workers read and update it. That's the entire "back-end."

Build sequence (each feature independent):

1. Deal Submission Portal (Weeks 1–3) — broker submits, gets instant personalized acknowledgment.
2. Internal Operations Dashboard (Weeks 2–5) — family-only command center.
3. Broker Dashboard (Weeks 4–7) — broker sees their deals, status, reports. The "holy shit" moment.
4. Investor Portal (Weeks 6–10) — tiered deal distribution with countdown timers.

5. Report Template Engine (Weeks 3–6) — form-based report generation replaces manual PDF formatting.
 6. Community Engine Interface (Weeks 8–12) — CRM, relationship tracking, social engagement logging.
-

CHAPTER 2: THE ASSEMBLY LINE — HOW A DEAL FLOWS

Stage 1 — Deal enters. Broker submits via portal, email, or phone. Email Command (A) triages. Personalized acknowledgment goes out immediately — references past deals, relationship history, submission count.

Stage 2 — Data pull (30 min). Data Intelligence (D) pulls CoStar, county records, market data into standardized template.

Stage 3 — Analysis (45 min). Financial Analysis (E) runs the models, writes 1-page recommendation.

Stage 4 — Decision. Shirel reviews Tier 1 (clear fit/reject). Gideon reviews Tier 2–3.

Stage 5a — If rejected: Rejection Engine sends personalized response explaining why it didn't fit and what WOULD fit. Relationship deposit made.

Stage 5b — If approved: Report Production (F) creates branded institutional PDF (2–3 hours). Report type confirmed first.

Stage 6 — Broker delivery. Report + three offers (aggressive/standard/premium) sent to broker. Phone Ops (C) follows up within 24 hours.

Stage 7 — If broker engages: Investor Distribution (I) activates the Integrity Protocol. Tier-by-tier cascade, 24-hour windows.

Stage 8 — LOI & close. Gideon + Bruce Smoler. The principals close the deal.

Total: submission to broker response in 4–6 hours. No other buyer does this.

Parallel engines running at all times: Outreach Engine (G) filling the pipeline with 5,000+ contacts/month. Market Surveillance (H) catching distress signals 3–6 months early. Personal Ops (B) keeping Gideon, Shirel, and Chaim freed up for the work only they can do.

CHAPTER 3: HIRING & VETTING

Global Talent — Not One Country

Philippines, Serbia, Kosovo, India, Nigeria, Kenya, Pakistan — cast the net wide. Post on OnlineJobs.ph, Upwork, LinkedIn, and local platforms. Let the vetting process decide who wins. One person from Manila, one from Belgrade, one from Nairobi. The PROTOCOL creates consistency, not the geography.

Serbia specifically: sophisticated workforce, strong English among young professionals, \$500–\$700/month for high-quality talent, European timezone, EU-path country with growing tech sector. Full research on Serbian hiring platforms and salary benchmarks to be conducted in a dedicated chat.

The 2-Week Paid Competition

For every role, hire 2 candidates simultaneously. Same tasks, full pay, 2 weeks. Week 2 ends: compare output against department metrics. Keep the stronger performer. Offer the second a different role or a graceful exit with a completion bonus (\$100–\$200). Both candidates know the rules from day one. Cost per evaluation: \$800–\$2,000. Cheap insurance.

Onboarding Protocol

Day 1: NDA + PIIA + contractor agreement. Access to ONE department's tools only (compartmentalization). 30-minute Loom onboarding video.

Day 2–3: Shadow period. Remote screen-share with Shirel or study recorded sessions and SOPs.

Day 4–5: Supervised independent work. Shift Lead reviews every output.

Week 2: Independent with daily QA. Week 3+: Fully independent with weekly spot-checks.

Workers Follow Protocol, Not Instinct

Terminal is built on protocol. Before the software enforces it, the human follows the same rules from an SOP document. Step by step, in order, with the prescribed tools. No free will on process. The protocol guarantees consistency across 13 people in 6+ countries. When the software is eventually built, it simply automates what the humans

have already been doing.

CHAPTER 4: INCENTIVES & RETENTION

Base Pay — No Deal Bonuses, Ever

Per Lazear (Stanford), Ariely (Duke), and Pink: bonuses on complex cognitive work create gaming behavior and destroy intrinsic motivation. Instead: **permanent milestone raises** — every 6 months, base pay increases 10–15% if metrics are met. After 2 years, the worker earns 40–60% more than they started. Leaving becomes irrational.

The AI Adoption Bonus

Every quarter, each department head demonstrates what percentage of tasks are now AI-handled versus manual. Quarter 1 baseline: 100% manual. Quarter 2 target: 20% AI. Quarter 3: 40%. Quarter 4: 60%.

Hitting target: 15% quarterly bonus. Exceeding: 25%.

The worker who reaches 80%+ AI automation gets PROMOTED — manage a second department, train new hires, or build AI workflows for another function. Making yourself efficient through AI is the fastest path to higher pay. Resisting AI is the fastest path to replacement.

The ultimate goal: a worker who builds their department to run 90%+ on AI sits on the beach and gets paid — because the machine works. That's the mission, that's the incentive, and that's the culture.

Phantom Equity (After 12–18 Months)

For proven loyalty: 0.5–1% phantom equity. Back-weighted 4-year vest: 10%/20%/30%/40%. Leaving in year 2 or 3 is economically painful — the biggest chunk vests in year 4. Combined with milestone raises, the golden handcuffs tighten progressively.

Compartmentalization as Retention

No worker sees the full system. Email doesn't know the models. Data doesn't know the

investor list. Report doesn't know the distribution protocol. If someone leaves, they take knowledge of ONE department. The machine belongs to the family.

CHAPTER 5: THE MEMBERSHIP MODEL

The Integrity Tax

Terminal doesn't work for any investor. Terminal works for the DEAL. The fee exists to ensure no investor's money influences which deals get attention, which offers get priority, or who gets better access. Every member pays equally within their tier. The protocol, not the relationship, decides everything.

The 6-Month Free Audition

First 6 months free for approved members — with REAL vetting (live verification call, not a PDF). During those months, Terminal watches the investor: Do they respond fast? Do they retrade? Do they actually close? The investor auditions for Terminal. Terminal auditions for the investor.

At month 6: conversion to paid. The investor isn't buying a promise — they're paying to KEEP what they already have.

Tiered Pricing

Year 1–3:

Tier	Annual Fee	Deal Size
Residential	\$10,000–\$15,000	Up to \$5M
Commercial Standard	\$20,000–\$30,000	\$5M–\$10M
Commercial Plus	\$30,000–\$50,000	\$10M–\$50M
Institutional	\$50,000+	\$50M+

Year 4+: \$100K–\$5M depending on tier. The platform's value compounds.

The Speed Advantage

Higher tiers see deals 24 hours before the next tier. In distressed CRE, first credible offer wins. The 24-hour head start on a \$50M asset is worth millions.

The Grandfather Clause

Members who join and pay in the first 3 years keep their entry price for life. When year 4 goes to \$250K–\$5M, the original \$30K members are getting 100x value. They'll never leave. They become the loudest evangelists. Transferable within the member's entity, NOT sellable to outside parties.

The Attribution Rule

Any Terminal data or analysis used by brokers in their own materials must carry Terminal branding: "Source: RePrime Terminal." If it's good enough to use, it's good enough to credit. Free marketing through every report that circulates the market.

CHAPTER 6: THE SHADOW BRAIN

Department-Level AI Memory Systems

Every department gets its own dedicated AI memory layer — not a shared chatbot, but a specialized intelligence that grows with every human action in that department.

Email Command LLM: Learns every broker interaction, every email pattern, every response that worked. After 6 months and 5,000 emails, it drafts 80% of responses autonomously.

Data Intelligence LLM: Learns which CoStar fields matter by asset type, which county records reveal hidden risk, which market indicators predict distress.

Financial Analysis LLM: Absorbs every model run, every human judgment on deal quality, every pursue/reject decision with reasoning. After 500 deals: the only labeled CRE deal quality dataset on earth.

Phone Ops LLM: Stores every call transcript, every broker personality profile, every negotiation approach and its outcome. Remembers what we offered every broker, what they countered, why we walked away. Feeds the AI Question Book and real-time coaching with institutional memory.

Report Production LLM: Learns which narrative structures, data presentations, and

risk framings produce the best broker engagement.

How to Build It Without Building Anything

Workers follow protocol and keep structured records — every email saved with tags, every data pull archived with notes, every analysis logged with decision + reasoning, every call transcribed with outcomes. Right now it’s organized files in Notion. But the STRUCTURE is designed from day one for future LLM ingestion. The training data accumulates automatically because the protocol demands good record-keeping.

The workers don’t know they’re building the dataset. They just think they’re following procedure. That’s the play.

The Connection Moment

The day these department-level systems connect, Terminal has a unified CRE intelligence that knows how to source, analyze, communicate, report, and distribute — all informed by thousands of real human decisions. The humans transition from operators to supervisors. The machine runs itself under human oversight.

THAT is what the \$50M partner is buying: not a portal, not a brand — a proprietary intelligence layer that no one can replicate because no one else collected the data.

CHAPTER 7: BUILD SEQUENCE — WEEK BY WEEK

Week	Action	Outcome
1	Post for Shift Lead + 2 Email Commanders + Gideon’s PA. Gideon & Shirel document daily workflows.	Hiring pipeline active. Training material being created.
2–3	Onboard winners. Post for Shirel’s PA + Phone Operator + Data Intelligence.	Email inbox transitioning to new team.
4	Email Command handling 80%+ of inbox. Hire developers. Start portal Feature 1 (Submission) + Feature 2 (Internal Dashboard). Post for Financial Analyst + Report Producer.	Shirel freed from email triage. Dev work begins.
5–6	Data Intelligence operational. Phone Operator making first calls with AI Question Book.	Assembly line forming.

7–10	Financial Analyst + Report Producer operational. Full assembly line live. Outreach Engine activated. Market Surveillance begins. Portal Features 1–2 delivered.	First real deals flowing through the machine. First reports delivered to brokers. Cold campaigns launched.
11–14	Broker Dashboard (Feature 3) live. Chaim's PA + Distribution Coordinator hired.	Brokers can track deals online. Investor infrastructure building.
15–20	Investor Portal (Feature 4) live. Membership model activated. First members vetted and onboarded.	Revenue from memberships begins.
21–26	Full operations. All departments staffed and running. 14 sourcing channels monitored.	Proof of concept. 50+ submissions/month. 10+ members. Revenue flowing. Ready for the \$50M conversation.

This document is the command center. Each chapter can be expanded into its own detailed SOP in a dedicated chat. The playbook grows as the machine grows — from seed to forest.
